

B/E Aerospace

European Based Technical Support.

Midwest Aero Support (MAS) and B/E Aerospace have signed an agreement that gives MAS the opportunity to expand maintenance and repair of B/E Aerospace seating products within Europe, Middle East and Africa.

This agreement triggered a strategic partnership development between:

MAS, a FAR/EASA part 145 approved repair centre based in Machesney Park (IL) USA.

&

PMV Industrie, an EASA part 145 and Part 21G approved manufacturing and repair station based in the Toulouse area.

Two years ago, Midwest Aero Support was selected by B/E Aerospace as its authorized service center for mainline aircraft seating products. (MAS has been the B/E Service Center for Regional aircraft seating products since 1999).

PMV Industrie offers 30 years of experience and has an international reputation in aircraft interiors, research, cabin design, composite structures, seat assembly and V.I.P. upholstery.

This association will encompass a broad range of seat maintenance, repair and overhaul, for B/E Aerospace seating products including comprehensive material support.

It will generate a sharing of

- Best practices in shop productivity,
- Reduced costs and minimised TAT,
- Improved and flexible response to customers.

In addition, a mobile team of highly trained professionals will be available to provide On-site technical support at customer's request.

Located 20 minutes north of Toulouse, a short distance from AIRBUS and Toulouse airport, we are easily accessible by road and by air from all around this territory.
